

FAST

one per-checkpoint signal

*requires the
probe stream
guarantee none*

FUSION

agreement gated by
smoothed confidence

*requires two
parameters, set once
guarantee none*

SELECTION

certified choice from $\mathcal{C}$

*requires a labelled
calibration split
guarantee Theorem 3.1*

JOINT

tier choice and
model routing

*requires a second,
smaller model
guarantee inherited*

each tier adds exactly one requirement to the tier on its left
